

SYSTEM PROCESS & WORKFLOW SPECIFICATION DOC 01

Client Operational Workflow Document for QA Test & Scope Definition

Client / Enterprise Name: [Enter Client / Company Name]

Project Name: [Enter Project Name]

Document Version / Date: v1.0 | [DD/MM/YYYY]

Target System / Application: [Enter Application Name]

1. Document Overview & Purpose

This document captures the current operational behavior (As-Is State) of the existing enterprise application. Provided directly by the Client / Business Analysts, this specification outlines end-to-end user journeys, system integrations, operational business rules, user role hierarchies, and decision paths. The Vendor Quality Assurance (QA) team will utilize this document as the baseline to design test strategies, test scenarios, and manual/automation test suites.

 **Instructions for Client / SMEs: Please complete all bracketed sections [] below with detailed workflow steps, business rules, role mappings, and integration points corresponding to your active system.**

2. System Architecture & High-Level Scope

2.1 Application Overview & Environment Details

Briefly describe the overall system architecture, web/mobile frontends, backend services, and database layers currently in production or staging.

Application Module / Name	[e.g., Enterprise Order Management & Billing Portal / Samurdhi Revamp]
Primary User Roles / Stakeholders	[e.g., Super Admin, Branch Manager, Finance Approver, Teller / Cashier, Field Collector]
Integrations / External APIs	[e.g., Payment Gateway, ERP (SAP), CRM (Salesforce), SMS Gateway, Core Banking API]
Supported Platforms / Browsers	[e.g., Chrome, Firefox, Edge, iOS App, Android App]
Environment Details (Production / Staging)	[e.g., Staging URL, Database Server Details, API Gateway Endpoint]

2.2 System Hierarchy & Completed Module Inventory

 **Instructions for Client / SMEs:** List all current modules that are completed and ready for QA testing. (The blue row is a sample guide—please add your actual modules).

Module ID	Module Name	Sub-Modules / Section Wise Scope	Development Status	QA Scope Included?
<i>[EXAMPLE] MOD-01 (e.g.)</i>	<i>User Authentication & RBAC</i>	<i>User Creation, Role Assignment, Permission Mapping</i>	<i>Completed</i>	<i>Yes</i>

3. End-to-End Business Process Workflows

This section details step-by-step user interactions and system behaviors across core operational modules. Use one table per workflow/feature.

Workflow 01: [Enter Workflow Name - e.g., User Registration & Account Verification]

Step #	Actor / Role	System Action / Trigger	Expected System Behavior	Business Rules & Validations	Post-Condition / Output
<i>[EXAMPLE] 1.1</i>	<i>Super Admin</i>	<i>Submit New User Form</i>	<i>System creates account & sends temporary password via email</i>	<i>Email must be unique; mandatory field check</i>	<i>User Account Created in Pending State</i>

Workflow 02: [Enter Workflow Name - e.g., Order Checkout & Payment Processing]

Step #	Actor / Role	System Action / Trigger	Expected System Behavior	Business Rules & Validations	Post-Condition / Output
<i>[EXAMPLE] 2.1</i>	<i>Branch Cashier</i>	<i>Click Initiate SOD Process</i>	<i>System verifies previous day EOD status & unlocks counter panel</i>	<i>Manager authorization required if prior EOD failed</i>	<i>Counter Ready for Daily Transactions</i>

4. User Roles, Designations & Security Rules (RBAC & Operations)

 **Instructions for Client / SMEs: Define user role hierarchies, permission allocation flows, password verification rules, and SOD execution requirements.**

4.1 Role Hierarchy & Designation Permission Mapping

User Designation / Role	Hierarchy Level	Module / Section Access Permissions	Assigned Action Levels
<i>[EXAMPLE] Branch Manager (e.g.)</i>	<i>Level 2 Supervisor</i>	<i>Front Office Approvals, Vault, SOD Execution</i>	<i>Create, Read, Update, Approve</i>

4.2 Operational Security, Authentication & SOD Rules

Security Specification Area	Client Business Rules & System Behavior	QA Verification Criteria
User Login & Creation Flow	<i>[EXAMPLE] e.g., Admin creates user -> System sends temp password -> Forced reset on 1st login.</i>	<i>[EXAMPLE] Verify first-time password reset prompt and mandatory fields.</i>
Permission Management Flow	<i>[EXAMPLE] e.g., Roles assigned via Admin panel; permission changes take effect immediately.</i>	<i>[EXAMPLE] Verify user restricted from unauthorized sub-modules.</i>
Password Verification Policy	<i>[EXAMPLE] e.g., Min 8 chars, 1 special char, 3 invalid attempts lead to 15-min lockout.</i>	<i>[EXAMPLE] Verify lockout message and account unlock trigger.</i>
Start of Day (SOD) Run Process	<i>[EXAMPLE] e.g., System requires Branch Manager SOD approval before cashier counter login.</i>	<i>[EXAMPLE] Ensure counter transactions fail if SOD is not executed.</i>
Credential Waiting & Session Timeout	<i>[EXAMPLE] e.g., Idle session expires after 15 minutes of inactivity.</i>	<i>[EXAMPLE] Verify session auto-logout after waiting duration.</i>

5. Exception Paths & Edge Case Matrix

Specify system behavior during non-standard, erroneous, or failure scenarios (e.g., network failure, invalid input, gateway timeouts).

Ref Step #	Exception Trigger / Condition	Expected System Handling & Error Message	Recovery Path / Fallback
<i>[EXAMPLE] 1.3 (e.g.)</i>	<i>Network Timeout during SOD Execution</i>	<i>System displays 'SOD Failed - Server Timeout' and logs incident</i>	<i>Manager re-triggers SOD after network restoration</i>

6. Test Data & Dependency Prerequisites

Detail specific test account credentials, database preconditions, or mock payload data required from the client for QA execution.

Module / Feature	Required User Role / Permissions	Prerequisite Data Inputs	Notes / Dependency
<i>[EXAMPLE] User Management (e.g.)</i>	<i>Super Admin Credentials</i>	<i>Valid Active User List & Designation Map</i>	<i>Requires SMTP Server configured for activation emails</i>
